(partial derivatives)

- a) Compute all partial derivatives of f(x, y) = ln(2x y) + 3x³ xy in a point A = [1; 1].
 b) Write a tangent line of the function in a cut x ≡ 1 in tangent point A.
- 2. a) Compute all partial derivatives of f(x, y, z) = ze^{xyz} in a point A = [0; 2; -1].
 b) Write a tangent line of the function in a cut y ≡ 2 ∧ z ≡ -1 in tangent point A.
- 3. Verify that a function $u(x,y) = e^y(y^2 x^2)$ is a solution of an equation

$$y\frac{\partial u}{\partial x} + x\frac{\partial u}{\partial y} = xu$$

4. Verify that a function $u(x,t) = \sin(x-ta)$ (with parameter $a \in \mathbb{R}$) is a solution of an equation

$$\frac{\partial u}{\partial t} + a \frac{\partial u}{\partial x} = 0$$

Differential and tangent (hyper-)plane

- 5. a) Write (total) differential of a function f(x, y) = ^y/_x in a point A₀ = [2; 1].
 b) Approximate the increment of the function between points A₀ and A₁ = [2.1; 1.2] (i.e. Δf = f(A₁) f(A₀) =?)
- 6. By using the (total) differential, approximate the value of $f(0.97; 1.02; 0.99) = \frac{\sqrt[4]{0.97}}{1.02^3 \sqrt[3]{0.99}}$ (with 2 decimal places precision) hint: Use known value f(1; 1; 1).
- 7. Given f(x, y) = 3y² 2x² + x and a point T = [2; -1; ?].
 a) Compute P.D. of the function in a point [2; -1].
 b) Find an equation of the tangent plane (τ) to the graph of the function at the point T.
- 8. Find an equation of the plane (τ) tangent to the graph of $f(x, y) = x \sin(x + y)$ at a point T = [-1; 1; ?]. Find also an equation of a line (ν) normal to the graph of f at point T.
- 9. a) Find an equation of the plane tangent to the graph of $f(x, y) = \ln(x + y)$ at a point [1;0;?]. b) Use the result to approximate the functional value $f(A_1)$ in a point $A_1 = [1.1; 0.1]$.
- 10. Given f(x, y) = 2x² y² and a plane σ: 8x 6y z + 12 = 0.
 a) Find a plane (τ) tangent to the graph of f and parallel to the plane σ.
 b) Find a line (ν) normal to the graph of f and normal to the plane σ.
- 11. Find an equation of the hyper-plane (τ) tangent to the graph of $f(x, y, z) = \ln(x^2 y + 3z)$ at a point T = [2; 1; 1; ?].
- 12. Given $f(x, y, z) = \ln(z + \sqrt{9 x^2 y^2})$,

a) Find Domain of definition of f and sketch it (at least in 2 cuts).

b) Find an equation of the hyper-plane (τ) tangent to the graph of f at a point T = [0; 0; 1; ?].
